## PROJECTS

### HAZESPACE2M – [GITHUB.COM/TANVIRNWU/HAZESPACE2M](https://github.com/TANVIRNWU/HAZESPACE2M)

1ST LEAD AUTHOR

We introduce a novel and diverse hazy dataset with 2 million hazy images of 10 distinct levels. Besides, we also propose a novel framework for single-image dehazing that improves the performance of the SOTA dehazing models.

### TriFUSE

1ST LEAD AUTHOR

A novel low-light image enhancement (LLIE) method based on the transformer and diffusion model outperforms the SOTA LLIE methods testing on real-life low-light images.

### LIGHTCDC

1ST LEAD AUTHOR

We produce a processed dataset for damaged crop classification and propose a custom lightweight CNN model for crop damage classification, which achieves 92% accuracy.

### CHILD

2ND LEAD AUTHOR

We introduce a custom computer vision-based model and a new labeled video dataset for detecting and recognizing hazardous activities performed by children in indoor settings.
